MODEL EXPERIMENTS ON ATOMIZATION OF LIQUIDS. (Modellversuche mit Flüssigkeitszerstäubung.)

Mintscho Popov. July 1961. 33p. OTS price, \$1.00. (NASA TECHNICAL TRANSLATION F-65. Translation from Revue de Mécanique Appliquée, v. 1, no. 1, 1956, p. 71-88 (Rumania).)

The purpose of this paper is to determine the similarity laws for the atomization of liquids with constant material properties and to verify them by comparison model experiments. The analyses show that the effect of the viscosity of the gas was very small and that approximate model experiments can be carried out without considering the ratio M of the gas to liquid viscosity, a condition that is difficult to satisfy. The derived and experimentally verified similarity laws permit the modeling of the atomization processes of liquids whereby considerable simplifications in experimental procedure and generalization of the experimental data are made possible.
